

# FCS-3000 Installation at Mari Petroleum Company, Pakistan

Writer/ Dept. of Sales 3

This month, BXB would like to share one FCS-3000 installation case at Mari Petroleum Company (MPCL) in Islamabad, Pakistan. MPCL is a large-scale international company of petroleum exploitation and production. Its aim is to make breakthrough on applying the newest techniques, knowledge, and competitive industrial practices for making high output value and income.

It's BXB's honor that MPLC, a high-efficient and high-profit company, chose FCS-3000 conference system for their project. Working with Crestron CP3 processor, Extron 8 x 8 switcher, Hitachi projector, Samsung LED screen, and Polycom video conferencing system, BXB's system is compatible with them to offer a complete conferencing total solution. FCS-3000 flush-mounted microphone unit is certified by Taiwan Excellence Award. The simple all-in-one interface combining speaking button and recording output plug together to make attendees plug in recording equipment. It's also equipped with volume controller and 3-color LED indicator light for recognizing operation modes. The black outlook can be completely integrated with the dark-brown conference table, which enhances the texture and quality of meeting room. Moreover, the flush-mounted design creates a simple and neat meeting atmosphere and offers more table space to attendees for putting on personal devices and stationary.

Besides simple outlook and user-friendly operation, the installation of FCS-3000 is also time-saving and easy. Each unit is equipped with 2 sets of RJ45 connectors for cabling. The gooseneck microphone is also pluggable for easy installation and maintenance.

Furthermore, for a high-efficient meeting, ensuring the meeting smoothness is also important. FCS-3000's conference microphone can effectively avoid the signal interference by mobile phones and other electronic appliances.

BXB's partner Britite Engineering Company has high profession and many installation experiences. They always offer

products and technical services based on users' demands. It's pleasant to find that BXB's FCS-3000 can satisfy MPLC's needs. We also appreciate Britlite's efforts on each project. Finding users' needs, satisfying their needs, and creating high product value are what BXB aims for. We thank again that Britlite holds the same aims and recommends BXB's products to customers.
